Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/708,905

Applicant(s)

MOHAMED ET AL.

Examiner

Christopher Findley

Art Unit

2621

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-28 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-28 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. ____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- ☒ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☒ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date 7/06/2004.
- ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. ____.
- ☐ Notice of Informal Patent Application
- ☐ Other: ____.

DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. **Claims 16-22 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.**

Independent claim 16 recites "A computer readable medium carrying one or more sequences of instructions for causing a processing system to..." that fails to meet the statutory requirement set forth in the Interim Guidelines, Annex IV (b):

(b) Nonfunctional Descriptive Material

Nonfunctional descriptive material that does not constitute a statutory process, machine, manufacture or composition of matter and should be rejected under 35 U.S.C. § 101. Certain types of descriptive material, such as music, literature, art, photographs and mere arrangements or compilations of facts or data, without any functional interrelationship is not a process, machine, manufacture or composition of matter.

Claim 16 should be rewritten as a computer readable medium stored thereon *computer executable* instructions directed to performing the steps recited in claim 16.

Claims 17-22 are dependent upon claim 16.

Appropriate corrections to the claims are required.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. **Claims 1, 15, 16, and 23 are rejected under 35 U.S.C. 102(a) as being anticipated by Tolku et al. (US 6549643 B1).**

Re claim 1, Tolku discloses a method of identifying key video frames in a sequence of image frames, each of said sequence of image frames containing a plurality of pixels, each of said plurality of pixels corresponding to a corresponding point of an area based on which said sequence of image frames are generated, said method comprising: determining a rate of change of visual content of each current frame from a corresponding reference frame, each of said current frame and said reference frame being comprised in said sequence of image frames (Toklu: Fig. 2B, step 212); and selecting said current frame as a key video frame (Toklu: Fig. 2B, step 218) if said rate exceeds a first threshold value (Toklu: Fig. 2B, step 214).

Art Unit: 2621

Re claim 15, Tolku discloses that said reference frame comprises an adjacent frame (Toklu: column 5, line 65, through column 6, line 7).

Claim 16 recites the corresponding computer readable medium containing a computer program for executing the method of claim 1, and, therefore, has been analyzed and rejected with respect to claim 1 above.

Claim 23 recites the corresponding system for executing the method of claim 1, and, therefore, has been analyzed and rejected with respect to claim 1 above.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. **Claims 2-4, 6, 9-11, 13, 17-19, 21, 24-26, and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tolku et al. (US 6549643 B1) in view of Zhang et al. (US 7027513 B2).**

Re claim 2, Tolku discloses a majority of the features of claim 2, as discussed above in claim 1, and additionally that a current frame is selected as a key video frame if the current frame's motion exceeds a second threshold (Toklu: Fig. 2B, when the cumulative motion in steps 220, 221, and 222 exceeds a threshold, the frame is selected as a key frame in step 223), but does not specifically disclose determining a displacement magnitude of each moved pixel of said current frame compared to the

Art Unit: 2621

position in said reference frame and computing a representative magnitude of said displacement magnitude for said moved pixels of said current frame. However, Zhang discloses a method for extracting key frames from video using a triangle model of motion based on perceived motion energy, where the average magnitude of the motion vectors for a particular frame is calculated (Zhang: column 9, lines 25-38), and the average magnitude is used to calculate the perceived motion energy (Zhang: column 9, lines 39-49). Since both Tolku and Zhang relate to selecting key video frames based on motion analysis, one of ordinary skill in the art at the time of the invention would have found it obvious to combine the triangle method of Zhang with the histogram analysis of Tolku in order to provide a uniform and consistent selection method that yields a proper number of key frames that are most representative of the video sequence content (Zhang: column 5, lines 34-37). The combined method of Tolku and Zhang has all of the features of claim 2.

Re claim 3, the combined method of Tolku and Zhang discloses that said representative magnitude comprises an average of motion energy vector magnitude of said moved pixels of said current frame (Zhang: column 3, lines 57-67).

Re claim 4, the combined method of Tolku and Zhang discloses that said rate is computed from said average motion energy vector magnitude (Zhang: column 3, line 65, through column 4, line 1).

Re claim 6, the combined method of Tolku and Zhang discloses identifying a plurality of active pixels in said current frame, wherein a pixel is considered an active

pixel if a corresponding displacement magnitude is outside of a range, wherein only said plurality of active pixels are used by said computing (Toklu: Fig. 2C, step 231).

Re claim 9, the combined method of Tolku and Zhang discloses enabling a user to specify one of a plurality of key video frames, wherein said plurality of key video frames are selected by said selecting (Zhang: Fig. 1, element 120; column 5, lines 43-44, indicate that the user may use the key frames to select the desired section of the video for display); and displaying said specified one of said plurality of key video frames (Zhang: Fig. 1, element 120; column 5, lines 43-44, indicate that the user may use the key frames to select the desired section of the video for display).

Re claim 10, the combined method of Tolku and Zhang discloses displaying a prior key video frame and a next key video frame in relation to said specified one of said plurality of key video frames, wherein said prior key video frame and said next key video frame are comprised in said plurality of key video frames (Zhang: Fig. 1, element 120, key frames are displayed in a sequence).

Re claim 11, the combined method of Tolku and Zhang discloses generating a display indicating the manner in which said plurality of key video frames are interspersed in said sequence of image frames, wherein said enabling is based on said display (Zhang: Fig. 12, the key frames are shown along with their corresponding frame numbers).

Re claim 13, the combined method of Tolku and Zhang discloses generating a display listing said plurality of key video frames, wherein said enabling is based on said display (Zhang: Fig. 1, element 120; column 5, lines 43-44).

Claim 17 has been analyzed and rejected with respect to claim 2 above.

Claim 18 has been analyzed and rejected with respect to claim 3 above.

Claim 19 has been analyzed and rejected with respect to claim 4 above.

Claim 21 has been analyzed and rejected with respect to claim 6 above.

Claim 24 has been analyzed and rejected with respect to claim 2 above.

Claim 25 has been analyzed and rejected with respect to claim 3 above.

Claim 26 has been analyzed and rejected with respect to claim 4 above.

Claim 28 has been analyzed and rejected with respect to claim 6 above.

5. Claims 5, 7, 8, 20, 22, and 27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tolku et al. (US 6549643 B1) in view of Zhang et al. (US 7027513 B2) as applied to claims 2-4, 6, 9-11, 13, 17-19, 21, 24-26, and 28 above, and further in view of Ma et al. (US 20040088723 A1).

Re claim 5, the combined method of Tolku and Zhang discloses a majority of the features of claim 5, as discussed above in claims 1-4, but does not specifically disclose that the first threshold and the second threshold are adjusted dynamically to ensure that a desired number of frames are selected as key video frames in a specified duration. However, Ma discloses a method for generating a video summary, where a binarization threshold is estimated in an adaptive manner (Ma: paragraph [0081]) when analyzing a video sequence for selecting key frames. Since Tolku, Zhang, and Ma relate to selecting key frames in a video sequence, one of ordinary skill in the art at the time of

Art Unit: 2621

the invention would have found it obvious to combine the attention modeling of Ma with the combined key frame selection method of Tolku and Zhang in order to create a representative video summary consisting of very short video clips, which contain the video immediately preceding and immediately following key frames that have been selected (Ma: Fig. 20). The combined method of Tolku, Zhang, and Ma has all of the features of claim 5.

Re claim 7, the combined method of Tolku, Zhang, and Ma discloses that said range set by a distance of two times the variance from the mean of a distribution (Ma: paragraphs [0081]-[0082], the threshold is a function of the variance).

Re claim 8, the combined method of Tolku, Zhang, and Ma discloses that said representative magnitude comprises an average of said active pixels (Ma: equation (12) and paragraph [0084]).

Claim 20 has been analyzed and rejected with respect to claim 5 above.

Claim 22 has been analyzed and rejected with respect to claim 7 above.

Claim 27 has been analyzed and rejected with respect to claim 5 above.

6. Claims 12 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tolku et al. (US 6549643 B1) in view of Zhang et al. (US 7027513 B2) as applied to claims 2-4, 6, 9-11, 13, 17-19, 21, 24-26, and 28 above, and further in view of Sull et al. (US 20060064716 A1).

Re claim 12, the combined method of Tolku and Zhang discloses a majority of the features of claim 12, as discussed above in claims 1-4, 6, and 9-11, but does not

Art Unit: 2621

specifically disclose that the display comprises a pie chart. However, Sull discloses techniques for navigating multiple video streams, where textual/visual information, such as a pie chart, may be displayed along with poster-thumbnails on the video selection screen for the user interface (Sull: paragraph [0307]). Since Tolku, Zhang, and Sull all relate to representative images for video sequences, one of ordinary skill in the art at the time of the invention would have found it obvious to combine the textual information of Sull with the key frame selection of the combined method of Tolku and Zhang in order to provide the user with more information, such as date and time of broadcast (Sull: paragraph [0307]), for improving the user's ability to quickly find the desired video segment (Zhang: column 5, lines 44-45). The combined method of Tolku, Zhang, and Sull has all of the features of claim 12.

Re claim 14, the combined method of Tolku, Zhang, and Sull discloses that said display comprises a button, which when selected, causes said display to be generated (Sull: Figs. 6A and 6B, the thumbnail images act as buttons, so that when selected by the user, the corresponding video clip is displayed).

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

a. Feature based hierarchical video segmentation

Bozdagi et al. (US 6493042 B1)

Art Unit: 2621

- b. Method of selecting key-frames from a video sequence

Wilf et al. (US 7184100 B1)

- c. System for automatic video segmentation and key frame extraction for video sequences having both sharp and gradual transitions

Zhang et al. (US 5635982 A)

Contact

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher Findley whose telephone number is (571) 270-1199. The examiner can normally be reached on Monday-Friday 7:30am-5pm, Alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mehrdad Dastouri can be reached on (571) 272-7418. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
